

YOU
ARE
IN DANGER
OF BEING
A
SLUDGE
VICTIM

- If you live or work or play near land where sewage sludge is spread – *farmland, public parks, ballfields*;
- If you use bagged “soil” or “fertilizer” which may contain sewage sludge – *though the label won’t say so*;
- If you garden with “compost” that is derived from sewage – *again, no labeling required*;
- If you eat food of unknown origin – *unless it is organically grown (since USDA forbids sludge on organic food)*;
- If you think “biosolids” is anything but a sneaky public relations name for sludge.
